

FUJITSU GENERAL Group Specified Chemical Substances List

September 5, 2025 (First Edition)

FUJITSU GENERAL LIMITED

Introduction

Since the enforcement of the European RoHS Directive, regulations on chemical substances contained in products have been established in various countries and regions, and their scope and requirements have become increasingly diversified in recent years.

This document compiles the relevant legal and social requirements of the countries and regions where our Group markets its products, and organizes regulated chemical substances into the “FUJITSU GENERAL Group Specified Chemical Substances List.”

We kindly request our suppliers to review the chemical substances used in their deliverables against the contents of this list, in order to ensure compliance with the requirements for specified chemical substances, which constitute a significant part of the FUJITSU GENERAL Group Green Procurement Standards, and to cooperate with the FUJITSU GENERAL Group green procurement activities.

Definitions

Specified chemical Substances	Chemical substances for which our group requires compliance by suppliers, based on laws and regulations or customer requirements.
Prohibited substances	Substances which are prohibited to use, contain, or contain exceeding the prohibited content conditions in the deliverables corresponding to the applicable products. Substances which shall be reported, even if prohibited content conditions are satisfied.
Reportable substances	Substances for which reporting of content, material composition, usage, and other relevant information is required when contained in the deliverables.
Prohibited content conditions	Conditions that prohibit the content of the chemical substances listed in the prohibited substances list. If a threshold is specified, the specified concentration limit must be met.
Contained	A chemical substance exists in the deliverables. This includes not only intentional additions and fillings, but also chemicals resulting from unintentional adhesion, contamination, migration, generation, or residues occurring during the period until delivery.
Content rate	When no specific denominator is indicated in the prohibited content conditions, the concentrations of chemical substances shall be calculated using the article as the denominator. When prohibited content conditions specify in homogeneous materials, the concentrations of chemical substances shall be calculated using that part as the denominator. The units in this list are expressed as weight ratios, such as wt%, ppm (mg/kg), or ppb (µg/kg).
Intentional addition	The intentional use of a regulated substance when its continuous presence is desired to achieve specific properties, appearance, or quality.
Exemption	A case in which the use of a regulated substance exceeding the prohibited content conditions is permitted for specific uses or periods as defined by legal regulations.
Homogeneous material	<p>One material of uniform composition throughout or a material, consisting of a combination of materials, that cannot be disjointed or separated into different materials by mechanical actions such as unscrewing, cutting, crushing, grinding and abrasive processes.</p> <p>[Examples of disassembly into homogeneous materials]</p> <ul style="list-style-type: none"> -The "metal" base material of sheet metal and the surface "plating layer," "chromate film," or "coating film" -Molded "plastic" and the surface "ink" or "coating film" used for printing -The "metal" used for wiring in printed circuit boards or LSIs and the "resin" or "glass" used for insulation

Effective date of the ban to deliver	The date on which suppliers are prohibited from delivering to the FUJITSU GENERAL Group any deliverables that do not meet the prohibited content conditions. The reference date shall, in principle, be set at least six months prior to the effective date of the relevant regulation and shall be determined in accordance with applicable legal requirements.
Packaging and packing materials	Packaging materials that are contained in our group's final products. This excludes packaging and packing materials supplied to us by our supplier that are not introduced into the market.
Textile products	Products made primarily from fibers that may come into contact with the skin under normal conditions of use.

Notes

*For chemical substances or applicable products that fall under multiple classifications, the stricter content conditions shall apply.

*As legal regulations related to specified chemical substances may be revised from time to time, the latest version of the relevant regulations must be referred to.

*Even for substances, applications, or products not listed in this document, compliance with applicable regional laws and regulations prohibiting their contents is mandatory.
