Control System Overview

for Split & Multi-split

All indoor units* are equipped with a wireless or wired remote controller as standard. Additional options are available, such as individual remote controllers and central remote controllers. The easy-to-operate central remote controller makes it simple to control the operation mode, temperature, airflow volume, timer, and other functions of each indoor unit from a single location.

* Except for some products

Air Conditioning Individual Control

Wired remote controller

A built-in thermo sensor monitors and controls room temperature accurately.

Simple and stylish design that harmonizes with the space

- The stylish design controller, UTY-RVRG, enables intuitive operation with touch screen. It is compatible with many 2-wired indoor units.

Harmonizes with The Installation Space

When not in use, the controller is a part of the interior décor. This is achieved by using mirrors, glass, and clear panels, and it appears to be one with the wall. The sleek and stylish design won the 2022 Good Design Award and was selected as a finalist for the 2023 IDEA award.

Intuitive Operation

The touch screen is easily operated by swiping vertically and horizontally, and users can operate the controller without using manuals.

Temp. Setting

Operation Mode

Status Indicator Lamp Colors

When not in use, the operation mode is indicated through indicator lamp colors shown under the controller. The indicator lamp can be switched ON and OFF to avoid glare at night.

Blue: Cooling

Red: Heating

Green: Dry

Purple: Auto

Features: Wired Remote Controller (Design type)

Refrigerant Cycle Monitor

The controller will display specific sensor values of outdoor and indoor units for maintenance and service support.

* Display screen example

* This function is only supported by split units, using the H-Serial communication protocol. Example: ASH30KMTB

Logo Display

The controller can display hotel logos when not in use. Images are sent via Bluetooth® connection where data is saved in the flash memory built into each controller.

* Color display available

AIRSTAGE Remo Set Application (free download)

Set up your wired remote controller via Bluetooth from your smartphone (or directly at the controller).

Features:

- Initial configuration
- Function setting
- Custom logo import
- Copy settings between controllers

Initial Settings / Indoor Unit Function

The initial controller settings and indoor unit function settings can be sent from a smartphone by pairing with the controller via Bluetooth. It also can read the setting values of a paired controller, and send a copy of them to one or more additional controllers, significantly reducing installation time.

Easy Operation Due to Large High-Resolution STN-LCD Touch Panel Screen

- Touch screen LCD
- Built-in daily/weekly timer (ON/OFF, temperature, modes)
- Backlit screen for easy operation in the dark.
- Room temperature display
- Controls up to 16 indoor units
- Supports 11 languages: Chinese, Dutch, English, French, German, Greek, Italian, Polish, Portuguese, Spanish, and Turkish
- Nonpolar 2-core type

High Performance and Compact Size

A single remote controller controls each connected indoor unit and provides a weekly timer function and a variety of energy-saving options.

Energy Saving Controls

Custom Auto

- Maintains 2 separate setpoints for heating and cooling operations.
- Automatically switches between heating and cooling modes.

* Not available for some models

Cooling set temp. 27°C, Heating set temp. 26°C

Auto-off timer

- While the Auto-off timer is activated, if the set off time is specified as, for example, one hour, the power will automatically turn off one hour after the start of operation.
- A desired time frame can be specified for the Auto-off timer.
- The off-time can be set from 30 to 240 minutes.

e.g.) Between 17:00 and 24:00 (over time hours), when the 1 hour set off time has elapsed, the system will automatically turn off the indoor unit as it has been judged to be "forgotten to turn off." Set off time for over time hours: 1 hour

NEW Safety Measures for R32 Products*1

- Clearly indicates refrigerant leak
- In the event of a refrigerant leak, the following actions will clearly notify the user:

- A buzzer will sound
- The backlight and operation indicator lamp will flash
- A message will appear on the display

- Notify when it's time to replace the detector

One year before the refrigerant leak detector needs replacement, it will notify the user with the following actions:

- Display a message and icon
- The operation indicator lamp will flash

Features: Wired Remote Controller (Touch Panel)

Refrigerant Cycle Monitor (option)

Wired Remote Controller (Touch Panel) will support to display some sensor values for maintenance and service support.

* This function is only supported by split units, using the H-Serial communication protocol. Example: ASHH30KMTB

Multi System Control*2

1) Lead Lag Operation

Standby Indoor Unit can be selected in lead lag operation. By this, the Indoor units will last longer than operating by nonstop.

2) Back Up Operation

In case of unexpected Indoor unit error, other Indoor units will start providing back up operation.

3) Lag Operation

In case of unexpected room temperature rise, other Indoor Units will start providing lag operation.

*1: The necessity of a refrigerant leak detector varies depending on room conditions. For details, please refer to the Design & Technical Manual.

*2: "Lead Lag Setting" is an easy-to-use function for room temperature control when using multiple indoor units, while reducing the burden placed on each indoor unit. If you wish to make use of this function, ensure you use indoor units equipped with a "Special Cooling" function. For Split products with "Special Cooling" function, refer to S-068 to S-071. If you use indoor units that do not have a "Special Cooling" function, under certain conditions, there is a chance that "Backup operation" may not operate correctly, and the "Lead Lag Setting" function will not give the expected results. Additionally, for rooms that require strict conditions, such as server rooms, please consider other appropriate measures. Please note that we will not provide compensation for any damages suffered to your appliances or data as a result of using this function. For more details, please confirm with your nearest retail store.

Supports a Variety of Applications

- **Vertical louver control:** Adjusts the vertical airflow direction of a duct-type indoor unit with an auto louver or a cassette type installed in a hotel room or a conference room.

- **Setting temperature range limitation:** Enables an indoor unit to operate in an energy-saving manner in a small building not equipped with a central remote controller.

- **Built-in room temperature sensor:** Monitors and controls room temperature accuracy.

NEW Safety Measures for R32 Products*1

- **Clearly indicates refrigerant leak**

In the event of a refrigerant leak, the following actions will clearly notify the user:

- A buzzer will sound
- The backlight and operation indicator lamp will flash

- **Notify when it's time to replace the detector**

One year before the refrigerant leak detector needs replacement, it will notify the user with the following actions:

- Display the icon
- The operation indicator lamp will flash

*1: The necessity of a refrigerant leak detector varies depending on room conditions. For details, please refer to the Design & Technical Manual.

Centralized Operation for Flexible Remote Management of All Air Conditioners

AIRSTAGE Mobile is ideal for a wide range of applications, from large residential buildings to smaller commercial spaces such as offices and stores. Anyone who has a smartphone and an adapter can access to manage the system at a low cost.

Hierarchical Group Management

Multiple air conditioners can be combined into a single group for centralized operation. Several groups can also be organized at once. Grouping the air conditioners by building, floor, or room makes it easy for users to monitor their operation status and operate them quickly.

Operate Air Conditioner and Check Its Operation Status Just by Talking to It

Connecting with a smart speaker allows the user to operate the air conditioner and check its operation status just by talking to it.

- Supports 9 languages: English, French, German, Greek, Italian, Portuguese, Russian, Spanish, and Turkish.
- Large backlit indicator lamp screen
- Large, easy-to-see operation panel

Example of system configuration

Home Central Remote Controller

Weekly timer

Up to 4 ON/OFF settings can be programmed per day. Two weekly patterns can be set, one for the cooling season and the other for the heating season.

Low noise operation

You can choose from 4 low noise levels depending on the installation environment. ON/OFF timing of low noise mode can be set with the timer.

10 °C heat operation

When you leave the house, the air conditioner runs a minimum heating operation to maintain the room temperature at 10°C.

*Consult your dealer for conditions of use.

Economy operation

When you select energy-saving economy mode, the temperature setting for the indoor unit increases (during cooling operation) or decreases (during heating operation) by 1°C and the maximum electric value of the outdoor unit is suppressed.

Prohibiting local control, including settings such as child lock

The Home central remote controller is equipped with a lock function to prevent unauthorized operation from the remote controllers of the indoor unit in each room. The Home central remote controller is equipped with a child lock to prevent children from accidentally turning the air conditioner on or off or changing its settings.

Safety Measures for R32 Products*1

If a refrigerant leakage is detected in the indoor unit, the following measures will be taken.

*1: The necessity of a refrigerant leak detector varies depending on room conditions. For details, please refer to the Design & Technical Manual.

Display refrigerant leak alert

An alert regarding refrigerant leakage is displayed, and users and administrators are notified.

Refrigerant leak alert

Refrigerant Leak Alert List Display

A buzzer will sound when an alert is displayed

If a refrigerant leakage occurs in the indoor unit, the backlight illuminates at maximum brightness and remains lit until the user or administrator confirms the alert screen. The buzzer continues sounding until all alarms are cleared or stopped. The refrigerant leakage buzzer cannot be set to silent.

Check for detector malfunctions or replacement timing

Issues replacement warnings due to malfunction or end-of-life of leak detectors, displaying icons and refrigerant leak lists on the monitoring screen. Status is notified via messages.

View detailed alert information

The system alerts users to refrigerant leaks via error codes, prompting them to arrange repairs or replacements.

System Controller

UTY-APGXZ1 (Software)

Up to
4 VRF network systems
Up to
400 outdoor units
Up to
1,600 indoor units

System controller enables advanced integrated monitoring and control of VRF network systems operating in small to large buildings.

- Up to 1,600 indoor units and 400 outdoor units on up to 4 VRF network systems can be controlled.
- To accommodate facility management needs, the system controller offers—in addition to precise air conditioning control—remote central control, electricity charge apportionment, schedule management, and energy-saving options for VRF network systems.
- Supports 7 languages: Chinese, English, French, German, Polish, Russian, and Spanish.

System Controller Lite

UTY-ALGXZ1 (Software)

Up to
1 VRF network system
Up to
100 outdoor units
Up to
400 indoor units

System controller Lite offers a set of standard functions to manage air conditioners operating in a small or midsize building.

- Up to 400 indoor units and 100 outdoor units on a VRF network system can be controlled.
- In addition to precise air conditioning control, a variety of applications are available as options to offer a wider range of control.
- Supports 7 languages: Chinese, English, French, German, Polish, Russian, and Spanish.

Visually Intuitive Operation

Click & Operate: The visual representation of the property is shown on the screen from the perspective most suitable for operation (Click & Operate) You can select from among 4 display options: site, building, floor, and list.

Freely define groups for batched control: Indoor units can be grouped for simplified batch control from the tree menu. They can be grouped by organizational hierarchy, such as by division, department, and section.

Note:
2D floor layout or 3D perspective of a building is not available on System controller Lite.

Features: System Controller / System Controller Lite

Third-Party Devices Connected via MODBUS® can be Controlled

Standard for System Controller **Option** for System controller Lite UTY-PLGXX2

When a MODBUS® adapter (locally available) is connected to a computer, electrical equipment and devices supported by MODBUS® can be monitored and controlled centrally from the computer. The central control can reduce wasted energy throughout an entire building resulting from a failure to turn equipment off during or after work, as well as reduce the need for on-site patrols.

Wide-Ranging Operation and Data Management

Standard System controller and System controller Lite

Schedule management

- An annual schedule can be arranged for each remote controller group or user-defined group.
- ON/OFF, operation mode, remote controller prohibition, and temperature settings can be programmed for up to 143 times per day at 10-minute intervals and for up to 101 configurations for each remote controller group.
- Settings can be programmed for a period that spans midnight.
- Allows for the programming of special settings for weekends, holidays, and store closings throughout the year.
- Low noise operation of outdoor units can be scheduled.

Wide-ranging control of indoor and outdoor units

- The operation status and mode of each indoor unit are displayed.
- Turn on and off each indoor unit and switch its operation mode.
- Setting temperature range limitation
- Low noise setting of outdoor units

Remote controller prohibition

Prohibits the operation mode, temperature setting, or ON/OFF of an indoor unit.

Error alert and e-mail notice

When something goes wrong, an error message is shown in a popup on a computer display with a chime, and an e-mail notice is sent. Errors of the past one year are logged and can be reviewed.

Operation and control history

A history of operation status and control can be maintained and retrieved.

Importing and exporting databases

Only an administrator is authorized to import and export registration, layout, and image data.

Automatic clock adjustment

Time can be set for all controllers in batch automatically.

Electricity Charge Apportionment

Standard on System controller
Option System controller Lite UTY-PLGXA2

Electricity charge apportionment method

This is a method to calculate monthly energy costs to be allocated to each tenant based on the amount of energy used by their air conditioners. The first step is to determine exactly how much energy is consumed by air conditioners in each tenant space. The second step is to divide the total energy charge billed by an electric power company based on the amount of energy used by each tenant to determine the energy cost to be allocated to each of them. (See figure on right) The calculation takes into consideration such factors as the number of unused rooms and nighttime electricity rate, which are shown in detail on an energy cost allocation schedule.

Features: System Controller / System Controller Lite

Remote Monitoring Management

- Standard** on System controller
- Option** System controller Lite UTY-PLGXR2

The System controller can be used on site or remotely over networks for remote central control. The System controller requires 2 software programs working together: The VRF controller runs on site and communicates with the VRF system; The VRF explorer, which runs at a remote location, provides a user interface and communicates with the VRF controller. The VRF controller and the VRF explorer run on a single computer or on different computers connected on a network. A computer running VRF explorer can centrally control up to 10 VRF system sites having up to 20 buildings each.

On site central control

Remote central control

Energy-Saving Management

- Option** System controller UTY-PEGXZ1
- Option** System controller Lite UTY-PLGXE2

A variety of energy-saving options can be selected depending on the season, climate, and time of day. Excellent energy-saving operation is performed while keeping users comfortable.

Main screen for energy-saving management

Energy saving graph data: This chart compares the energy consumption for the current month with the previous month and with the same month of the previous year to keep track of the energy-saving performance.

Indoor unit rotation

Indoor units can be automatically rotated to operate within a group in accordance with a predetermined annual schedule to reduce power consumption while keeping users comfortable. The operation stoppage rate can be selected for an indoor unit.

Peak-cut mode

The system controller monitors the connected power meter and controls the energy to maintain the target power consumption set for each time period by changing the set temperature of the indoor units or turning off the thermostat so as to keep the users comfortable. Indoor units to be controlled can be grouped in many ways, and the control level can be set for each group.

Capacity saving for outdoor unit

The upper limit on the capacity of an outdoor unit can be adjusted to reduce power consumption during a hot summer or cold winter by averaging out the power-saving performance of each refrigerant system. The upper limit on capacity can be set at 50% of the rated capacity or more.

MODBUS® Converter for indoor unit

UTY-VMSX

Up to
1 indoor unit

MODBUS® Converter Enables Air Conditioners to be Fully Integrated into a MODBUS® Network.

- Simple installation due to small and compact size.
- No separate external power supply required.
- The MODBUS® converter must be connected to an indoor unit on a one-to-one basis.
- The MODBUS® converter enables central monitoring and control of air conditioners from BMS, central, or home controller.

Easy Installation

Easy to install with minimal wiring and without the need for a power supply cable to the converter

Basic Control

- Turning the units on and off
- Mode control (Heat, Cool, Dry, Auto, Fan)
- Fan speed control
- Louver position (airflow direction setting)
- Room temperature setting and display
- Economy mode setting
- Error status

MODBUS® Converter Enables Air Conditioners to be Fully Integrated into a MODBUS® Network.

- Compact and lightweight design
- Direct connection to MODBUS® network
- MODBUS® convertor enables central monitoring and control of air conditioners from BMS or a central controller.
- Up to 9 converters can be connected to a VRF network (UTY-VMGX). Simultaneous control, such as Power ON/OFF and temperature setting, can be performed for each zone.
- If a connection error occurs after installation work is completed, the source of the error can be located easily.

DC power supply type

UTY-VTGXV
AC power supply type

Up to
16 single indoor units
Up to
1 group
Up to
100 Network Converters

- A network converter is required when connecting a single-split system to a VRF network system.
- Compact and lightweight design
- Connectable to both nonpolar 2-core and polar 3-core remote controllers

Installation Example

- A 1-remote-controller type and a 2-remote-controller type are available.
- Power supply (220 to 240 V AC, 50/60 Hz) is required for the 2-remote-controllers type.

- Both nonpolar 2-core and polar 3-core type Wired remote controllers can be connected.

- Central control can be provided for single-split systems. (Up to 100 network converters can be connected in a VRF network system)

Specifications

Model name	UTY-VTGX		UTY-VTGXV
Power supply	Polar 3-core 12 V DC	Nonpolar 2-core DC 12 V	Single phase ~220 to 240 V 50/60 Hz
Input power (W)	Max. 1.2 W		Max. 3
Dimensions (H × W × D) (mm)	140 × 117 × 43		54 × 260 × 150
Weight (g)	250		1,100

Network Converter for LONWORKS™

UTY-VLGX

Up to
4 units to BMS
Up to
100 outdoor units
Up to
128 indoor units

- Connects the VRF network system to a LONWORKS™ open network to manage small and mid-sized BMS and VRF network system.
- The UTY-VLGX enables centralized monitoring and control of VRF network system from a BMS via a LONWORKS™ interface.
- Up to 128 Indoor units can be connected to one network converter for LONWORKS™

Installation Example

Specifications

Model name	UTY-VLGX
Power supply	Single phase ~208 to 240 V 50/60 Hz
Power consumption (W)	4.5
Dimensions (H × W × D) (mm)	67 × 288 × 211
Weight (g)	1,500

Transmission specifications (BMS side)

Transmission speed	78 kbps
Transceiver	FT-X1 (available from Echelon® Corporation)
Transmission line form	Free topology
Terminal resistor	None (converter to be attached at the terminal of a network)

External Switch Controller

UTY-TERX

Up to
1 group

Air Conditioner Switching can be Controlled by Connecting This External Switch Controller to Other Sensor Switches.

- In combination with a commercially available card-key switch or other sensors, this External switch controller enables the control of ON/OFF, room temperature, and fan speed of connected air conditioners as well as master control functions. This makes this product an ideal choice for use in hotel rooms.
- Card key or other sensor switches are locally available.
- The set temperature can be specified at two points each for cooling and heating operations (4 points in total).

Installation Example

Occupancy sensor monitors the movement of a person in a room. When it detects that the person has left the room, it switches the air conditioner to low-capacity mode. When a person returns to the room, the air conditioner returns to the previous operation mode.

Occupancy sensor equipment needs to be purchased separately. Occupancy sensor is not mounted on an External switch controller.

Signal Amplifier

UTY-VSGXZ1

- The transmission line can be extended up to 3,600 m using multiple Signal amplifiers.
- Up to 8 Signal amplifiers can be added in a VRF network system.
- A Signal amplifier is required.
 - (1) When the total wiring length of the transmission line exceeds 500 m.
 - (2) When the total number of units on the transmission line exceeds 64.

Optional Parts Overview

For Split & Multi-split, VRF

A variety of optional parts are available to enable installation of the selected indoor unit properly according to the environment.

Optional Parts For Cassette

Occupancy sensor kit
A built-in thermo sensor monitors and controls room temperature accurately.

Cassette grille
A lineup of cassette grilles that match a variety of interiors. A grid ceiling-type cassette grille has been added to the lineup.

Silver ion filter
The Silver ion filter helps to keep indoor air free from viruses, bacteria and molds.*

Fresh air intake kit
Fresh air can be taken in by a fan connected to an external control unit.

Insulation kit for high humidity
Insulation kit for high humidity is used when the installation location is in a high humidity environment.

Air outlet shutter plate
Airflow directions can be changed to 3 directions using the Air outlet shutter plate depending on the installation location.

Wide Panel
When a cassette type is installed in a narrow space in the ceiling, the wide panel fills in that space.

Panel spacer
If the ceiling space is tight and the main body protrudes from the ceiling surface, a panel spacer can be used as a decorative trim.

Optional Parts For VRF (Heat pump / Modular type)

Pressure sensor kit
When installed, the height difference between the outdoor unit and indoor unit can be allowed up to 110 m.

Optional Parts For R32 VRF products

Gas Sensor kit
Used to ensure standards compliance and safety when R32 VRF products are installed.

Expansion kit
Connect to indoor units to expand the number of inputs and outputs when using multiple safety devices or external input / output functions.

Optional Parts For Floor

Half concealed kit
Used to half conceal a floor type indoor unit in the wall.

Silver ion filter
The Silver ion filter helps to keep indoor air free from viruses, bacteria and molds.*

Optional Parts For Common

Remote sensor unit
Detects the room temperature around the sensor. Used to construct systems that improve comfort. (See the options list for compatible devices.)

External connect kit & set
Connect the printed circuit board (PCB) to external devices.

Connection Units
Connection units are available to separate the pipes when connecting multiple indoor units in a Multi-split type or VRF system.

External power supply unit
The External power supply unit protects the increment in the system even if the power supply for some of the indoor units is shut down.

Optional Parts For Duct & Ceiling

Auto louver grille kit
The optional clean-looking flat Auto louver grille blends into any interior and provides a comfortable airflow.

Silver ion filter
The Silver ion filter helps to keep indoor air free from viruses, bacteria and molds.*

Long-life filter
Captures grit and dust. Long-life design with consideration of running costs.

Flange
Flanges are used when connecting a medium static pressure duct type and a ceiling type with air intake and exhaust ducts.

Drain pump unit
Drains water that has accumulated during operation.

Connection Parts

Communication kit
Required for a wall-mounted type when the External connect kit set or a Wired remote controller is connected to the indoor unit.

External input and output PCB
For Wall-mounted, Duct, or Cassette type, these parts are required when the external input and output function is used.

External input and output PCB box & bracket
Box and bracket for installing the External input and output PCB.

External input and output PCB box & bracket
Box and bracket for installing the External input and output PCB.

*Not a result of experiments in an actual use environment. Silver ion filter inhibits activity or growth of microorganism, but do not prevent infection.

The Silver Ion Filter Helps to Keep Indoor Air Free from Viruses, Bacteria and Molds.

(Not a result of experiments in an actual use environment. Silver ion filter inhibits activity or growth of microorganism, but do not prevent infection.)

The Silver Ion Filter Inhibits The Activities of Viruses*¹, Bacteria*² and Molds*³ Trapped on the Filter.

(Only effective when the microorganism is trapped on the filter with dust or droplet)

*¹ [Testing organization] Kitasato Research Center for Environmental Science [Test Report] No. 2020_0408 [Test virus] Escherichia coli phage Qbeta NBRC 20012 (1 type) [Test Method] Based on the antiviral test method for textile products (JIS L 1922) [Test results] Inhibited by at least 99% in 24 hours. The Filter is Easily Removable* and Hand-Washable.

(*Wall-mounted and floor models only)

*⁴ Hand-washing or vacuuming by 3 months is recommended. Cleaning frequency varies depending on the environment of use.

Design Flexibility

The height difference between the outdoor unit and the indoor unit is normally 50 m for the V-IV and VU-V* series, but can be extended to 110 m by installing the Pressure sensor kit. (Can only be connected to the V-IV and VU-V* series. Also, it can only be connected to outdoor units using outdoor unit software compatible with the product.)

*Only when using the heat pump.

External Power Supply Unit

UTZ-GXXA / UTZ-GXXC / UTZ-GXXD

The External Power Supply Unit Protects The Increment in The System Even If The Power Supply for Some of The Indoor Units is Shut Down.

Connects to the External power supply unit to supply power to the indoor unit from the auxiliary power supply. This allows for continuous operation without system errors. Built-in relays reduce installation time and cost. The UTZ-GXXC and UTZ-GXXD have a built-in relay, which reduces installation time and cost.

High Reliability

- A: Interruption of the main power supply is detected by the power cut-off detection part.
- B: Supplies power for driving the expansion valve of the indoor unit.
- C: Gives notification of the power supply from the External power supply unit.

Note

- When changing the power supply voltage to 24 V AC, use a power transformer with an insulated structure that complies with the regulations* of the installation region.
- A powered-off indoor unit driven by the External power supply unit is treated in the same way as an operation-off unit in the electricity charge appointment function. If standby power is generated, the result of the electricity charge appointment may not be zero.
- The UTZ-GXXD must not be used in areas requiring safety measures.
- For details regarding the design when using the UTZ-GXXD in areas where safety measures are not required, please refer to the technical manual.

* UL Class II or IEC 61558 Class III, for example.

Gas Sensor Kit

UTY-SGZH / UTY-SGZH21

Enhanced Safety measures for R32

The system is designed to meet the environmental safety requirements specified in the IEC 60335 2-40 standard for the use of R32 refrigerant. The environment requiring safety measures is determined by the size of the room in relation to the amount of refrigerant required.

Shut off valve kit
UTP-GX027A, UTP-GX060A
UTP-GX090A

Block the path to prevent refrigerant flow in the event of a refrigerant leakage.

Expansion kit
UTZ-JXXA

Used to ensure standards compliance and safety when R32 VRF products are installed.

Gas sensor kit*
UTY-SGZH / UTY-SGZH21

Used to ensure standards compliance and safety when R32 VRF products are installed.

*Direct connection of the gas sensor kit to the indoor unit requires the UTY-XWZXZL connection cable.

Conditions Requiring Safety Measures

When installing R32 VRF products, it is necessary to determine whether safety design is required. Conditions include the amount of refrigerant filled in the product and floor area. For details on how to confirm whether safety design is required, refer to the Design & Technical Manual.

Except lowest underground floor

For example, if a product with a total refrigerant charge of 5.5 kg is installed in a small room of 10 m², two safety devices are required as it falls within the yellow area of the graph.

Features: Gas sensor kit

Connection pattern

1) Corresponds to the case where the classification of air conditioner installation differs from property to property.

When connecting directly to the indoor unit

When installing multiple units in the same room

When connecting with the shut-off valve kit

2) Multiple rooms or areas are air conditioned using ducted airflow paths
